Belt Resurfacers

RMC-800
with optional bench

RMC's Belt Resurfacers are rugged and versatile machines that are designed to substantially reduce resurfacing time and labor costs. These high quality Belt Resurfacers have been proven effective time after time in rebuilding facilities all across the United States. **RMC** Belt Resurfacers will deliver years of dependable and productive resurfacing service to any size shop for dry resurfacing of aluminum heads, intake manifolds, cast iron exhaust manifolds, small cylinder heads, gasket surface areas, covers and pans and a multitude of other small parts.

Dedicated to serving your engine rebuilding equipment needs, since 1957

RMC Belt Resurfacers are faster ... stronger ... more versatile ... and more affordable!

RMC Belt Resurfacers are designed to offer years of dependable resurfacing work at an affordable price. The RMC-800 Belt Resurfacer includes a low voltage foot pedal control and a hardened and precision ground platen, plate steel frame construction and easy front panel access for quick belt changes. The ideal choice for fast resurfacing of exhaust manifolds, assorted pans and covers, they can also be used to remove gasket material.
